1	What is the purpose of the study?	The purpose of the study is to investigate the effect of the independent variable on the dependent variable.	
2	What is the research question?	The research question is to determine whether there is a significant difference between the two groups.	What are the independent and dependent variables?
3	What are the independent and dependent variables?	The independent variable is the treatment group, and the dependent variable is the outcome measure.	What are the levels of the independent variable?
4	What is the study design?	The study is a randomized controlled trial.	What is the sample size and how was it determined?
5	What are the inclusion and exclusion criteria?	The inclusion criteria are that participants must be aged 18-65 and have no pre-existing conditions. The exclusion criteria are that participants must not be pregnant or taking any medication that could affect the results.	What are the potential confounding factors and how were they controlled for?
6	What are the data collection methods?	Data were collected using a standardized questionnaire and a validated outcome measure.	What are the statistical tests used and why?
7	What are the results of the study?	The results show that there was a significant difference between the two groups, with the treatment group showing a higher mean score than the control group.	What are the limitations of the study?
8	What are the conclusions of the study?	The study concludes that the treatment group showed a significant improvement in the outcome measure compared to the control group.	What are the implications of the study?
9	What are the strengths and weaknesses of the study?	The strengths of the study are that it was a randomized controlled trial and used a validated outcome measure. The weaknesses are that the sample size was relatively small and the study was only conducted in one location.	
10	What are the future research directions?	Future research should investigate the long-term effects of the treatment and explore the underlying mechanisms of the observed effects.
